# CS410: Artificial Intelligence

Shuai Li

John Hopcroft Center, Shanghai Jiao Tong University

<https://shuaili8.github.io>

<https://shuaili8.github.io/Teaching/CS410/index.html>

# Teaching Assistant

- Fang Kong (孔芳)
  - Email: fangkong@sjtu.edu.cn
  - 1<sup>st</sup> year PhD student
  - Research on online influence maximization
  - Office hour: Thursday 6-8pm
- Qizhi Li (李奇之)
  - Email: qizhili@sjtu.edu.cn
  - 1<sup>st</sup> year Master student
  - Research on recommendation systems
  - Office hour: Friday 7-9pm

# References (will add more during course)

- Artificial Intelligence: A Modern Approach by Stuart Russell and Peter Norvig (4<sup>th</sup> edition)
- Reinforcement Learning: An Introduction by Richard S. Sutton and Andrew G. Barto
- 周志华 《机器学习》 清华大学出版社，2016.

# Goal

- Know what is AI and what it usually covers
- Familiar and understand popular AI problems and algorithms
- Be able to build AI models in applications
  - Know which algorithms to adopt and when to adopt
- Get a touch of top research

# Prerequisites

- Basic computer science principles
  - Big-O notation
  - Comfortably write non-trivial code in Python/numpy
- Probability
  - Random Variables
  - Expectations
  - Distributions
- Linear Algebra & Multivariate/Matrix Calculus
  - Gradients and Hessians
  - Eigenvalue/vector

# Grading

- Attendance and participation: 5%
- Assignments: 35%
- Project 1: 25% (individual project)
- Project 2: 35% (team project)

# Honor code

- Discussions are encouraged
- Independently write-up homework and code
- Same reports and homework will be reported

# Course Outline

- Search
- CSP problems
- Game trees
- ML: perceptrons and NNs
- HMMs
- MDPs
- Particle filtering

# Introduction

# What is Artificial Intelligence

- Describe machines (or computers) that mimic "cognitive" functions that humans associate with the human mind, such as "learning" and "problem solving".

--Russell, S. J., & Norvig, P. (2016). *Artificial intelligence: a modern approach*. Malaysia; Pearson Education Limited.

- Intelligence is the computational part of the ability to achieve goals in the world. It is related to the similar task of using computers to understand human intelligence, but AI does not have to confine itself to methods that are biologically observable.

--By Prof. John McCarthy of Stanford University

-- <http://jmc.stanford.edu/artificial-intelligence/what-is-ai/index.html>

# What is AI?

The science of making machines that:

Think like people

Think rationally

Act like people

Act rationally

# Maximize Your Expected Utility

# What About the Brain?

- Brains (human minds) are very good at making rational decisions, but not perfect
- Brains aren't as modular as software, so hard to reverse engineer!
- “Brains are to intelligence as wings are to flight”
- Lessons learned from the brain: memory and simulation are key to decision making

# Designing Rational Agents

- An **agent** is an entity that *perceives* and *acts*.
- A **rational agent** selects actions that maximize its (expected) **utility**.
- Characteristics of the **percepts**, **environment**, and **action space** dictate techniques for selecting rational actions
- **This course is about:**
  - General AI techniques for a variety of problem types
  - Learning to recognize when and how a new problem can be solved with an existing technique

# Pac-Man as an Agent

# What is Machine Learning

- Term “Machine Learning” coined by Arthur Samuel in 1959.
  - Samuel Checkers-playing Program
- Common definition (by Tom Mitchell):
  - ***Machine Learning is the study of computer algorithms that improve automatically through experience***
- Subfield of Artificial Intelligence (AI)
  - The hottest subfield - reinvigorated interest in AI due to deep learning!

# Difference between AI and ML

- AI is a bigger concept to create intelligent machines that can simulate human thinking capability and behavior, whereas, machine learning is an application or subset of AI that allows machines to learn from **data** without being programmed explicitly.

# An example of AI but is not machine learning

- A\* search algorithm
  - Objective: Find the shortest path between two nodes of a weighted graph
  - Use heuristic information
  
- Compare with Breadth First Searching and Greedy Searching

# Breadth First Searching

- Pink: start point, Purple: end point;
- Blue: visited points, the darker the earlier

Each time it visits, or expand the point with least  $g(n)$  value

- $g(n)$  is the distance from start point to point n.

Short comings: computing burden is too high, it visited too many points before getting the end point.

# Greedy Searching

- Each time it visit or expand the point with least  $h(n)$  value
  - $h(n)$  is the distance from point  $n$  to end point. It works fine when there is no obstacles.

- The cost doubles when there is obstacles

# History of AI

- 1950s
  - Turing's test
  - Dartmouth Conference 1956:  
the birth of AI

## 1956 Dartmouth Conference: The Founding Fathers of AI

John McCarthy

Marvin Minsky

Claude Shannon

Ray Solomonoff

Herbert Simon

Arthur Samuel

Oliver Selfridge

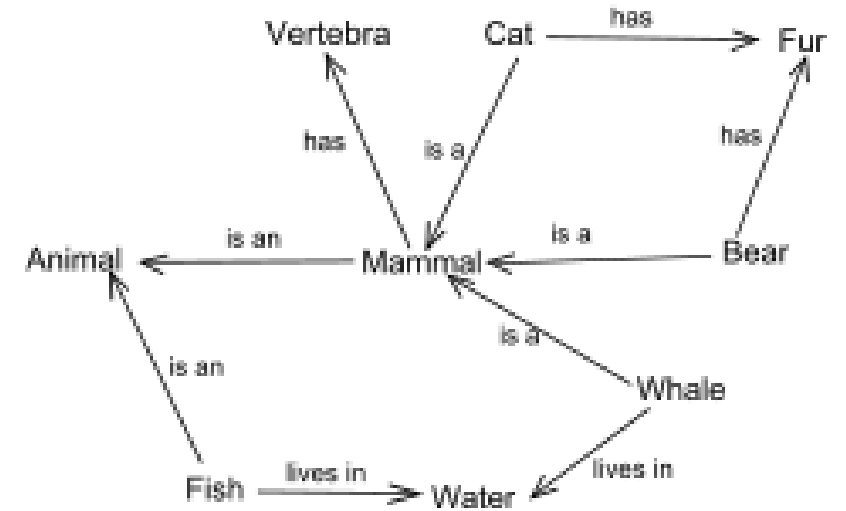

Nathaniel Rochester

Trenchard More

# History of AI (cont.)

- 1960s
  - Reasoning as search
  - Natural language
    - STUDENT by Daniel Bobrow
      - Can solve high school algebra word problems
      - Semantic net
  - Micro-worlds
    - Marvin Minsky and Seymour Papert of the MIT AI Lab
    - Basic principles, simplified models

# History of AI (cont.)

- 1970s - first AI winter
  - Limited computer power
  - Intractability and the combinatorial explosion
  - Commonsense knowledge and reasoning
    - Hard to encode so many concepts and rules
    - Didn't know how to teach computers to learn these
- 1980s - Boom
  - Expert system
    - Specific domains to limit knowledge requirements
- 1990s - second AI winter
  - Expectations are far beyond reality

# History of AI (cont.)

- 2000s
  - Deep Blue
    - first computer chess-playing system to beat a reigning world chess champion, Garry Kasparov
  - Intelligent agents
    - e.g. detect spam emails
- 2010-now
  - Deep learning
  - Big data
  - Artificial general intelligence (AGI)

Figure 1 Floating-Point Operations per Second for the CPU and GPU

# Examples

# Search problems

# Decision Tree

- Split the data by informative questions.

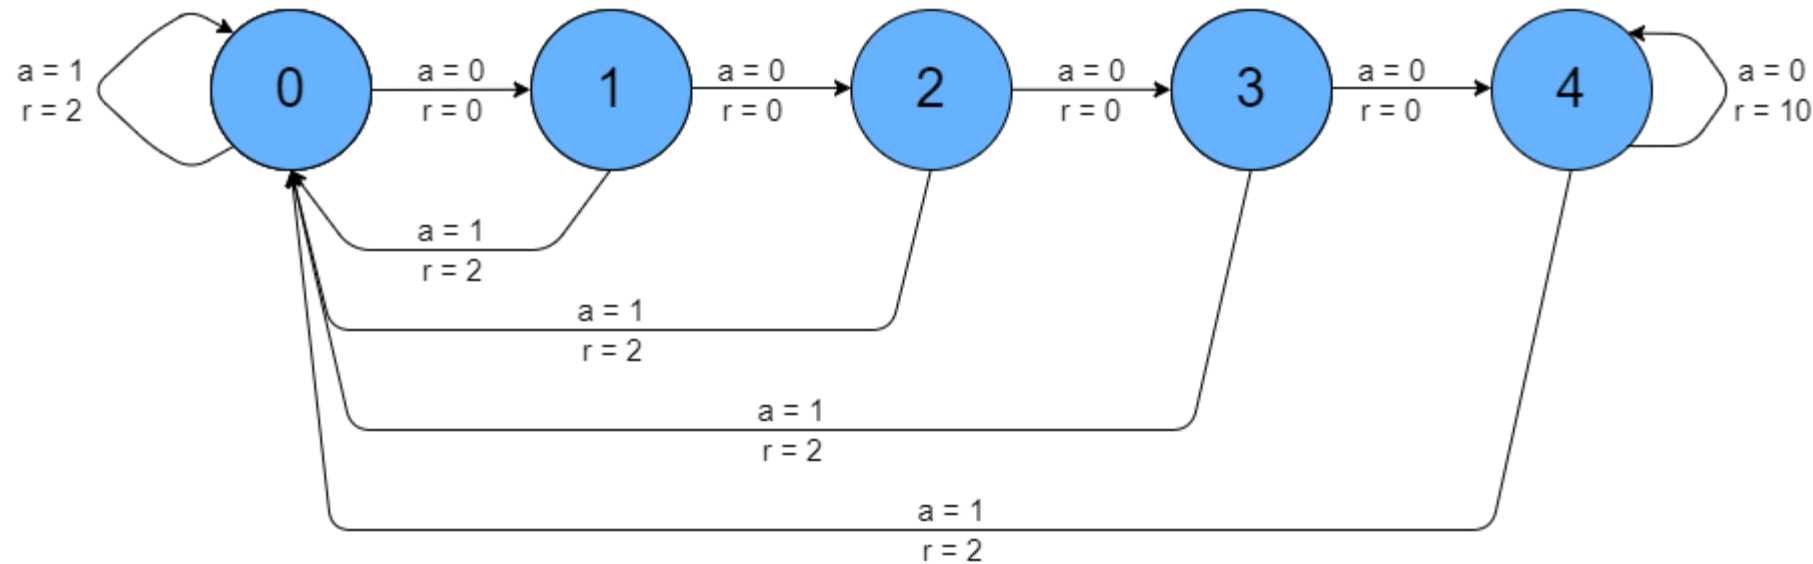

# Neural Network

- It approximates the function in high dimensional space.

# Reinforcement Learning

- Learn which action brings the highest reward at each state, based on your experience.

# Breaking through by DRL

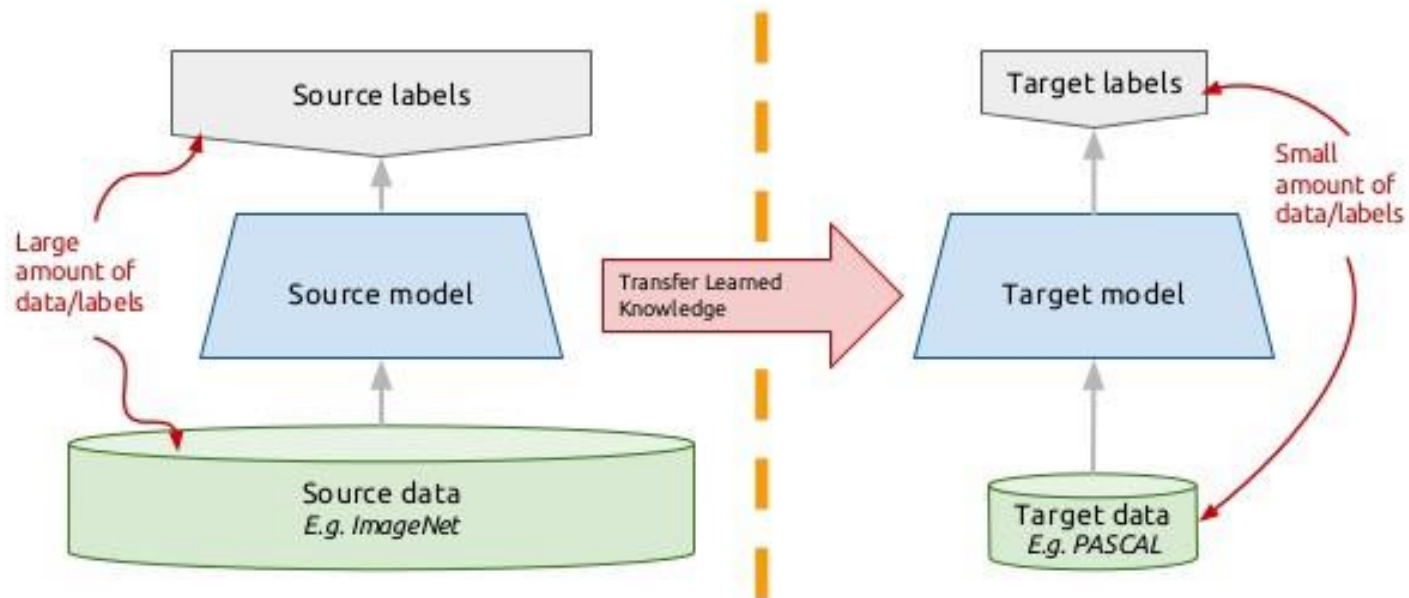

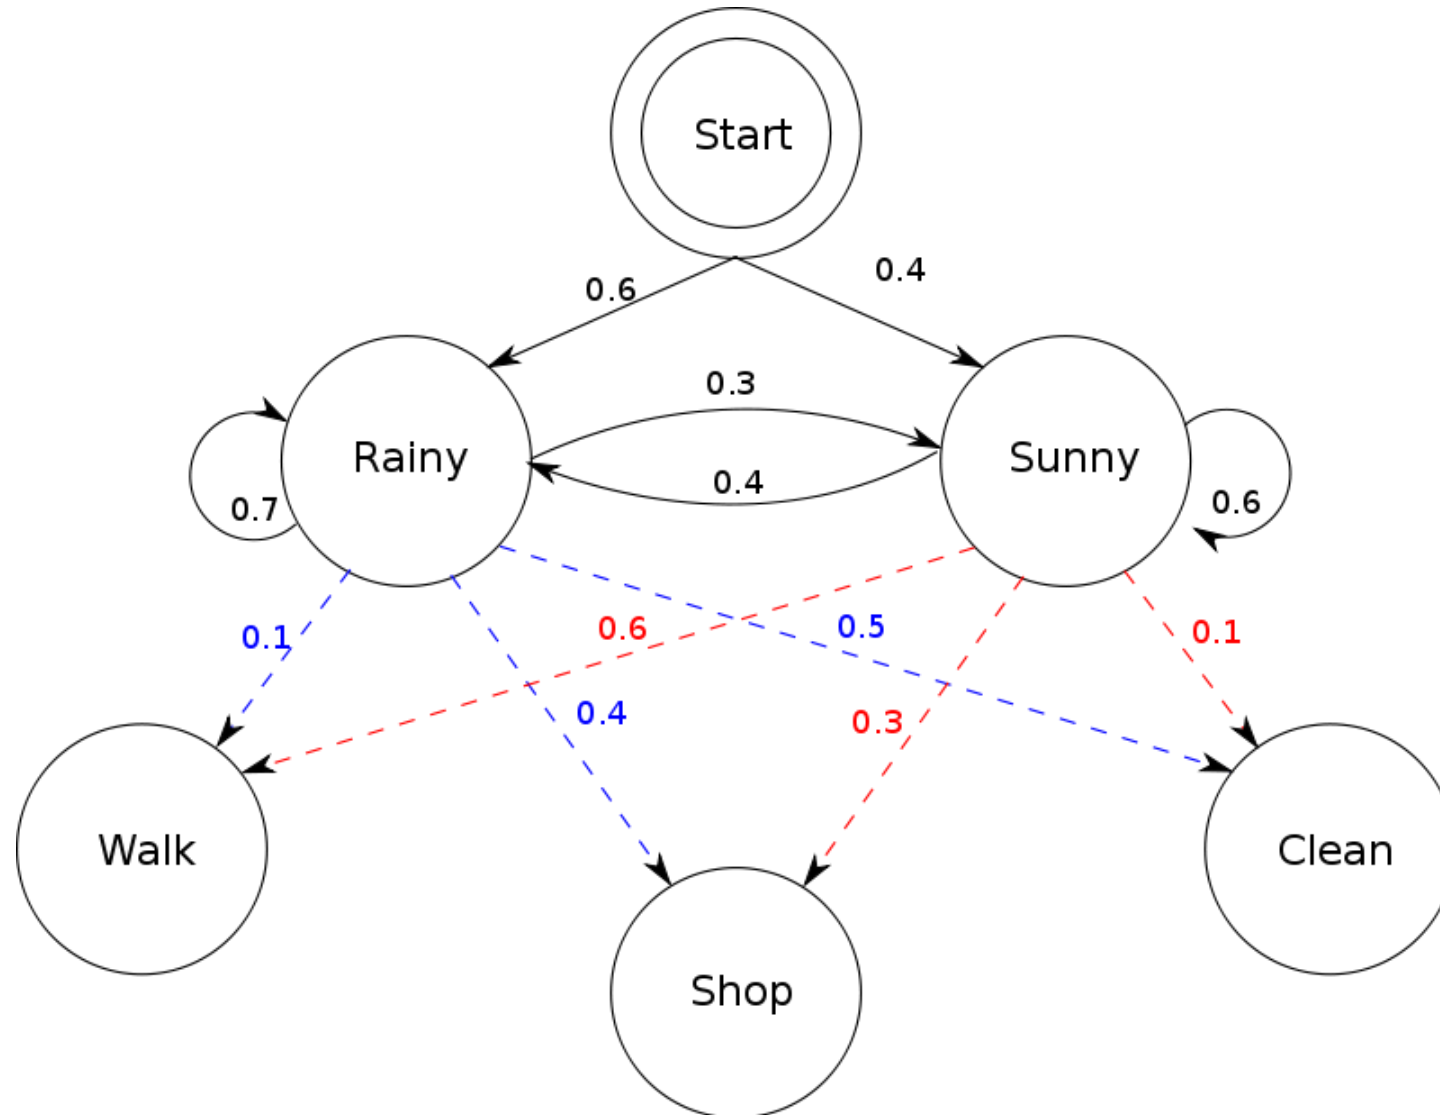

# Transfer Learning

- Learn from source data and apply the knowledge on target data

## Transfer learning: idea

# Hidden Markov models

# Particle filtering

# AI and ML Trend

Interest over time ?

Separated

# Speech recognition (Unsupervised, ICA, cont.)

Mixed

Separated

# Speech recognition

- Previous works use
  - Hidden Markov models (HMMs)
    - Deal with the temporal variability of speech
  - Gaussian mixture models (GMMs)
    - Determine how well each state of each HMM fits a frame or a short window of frames of coefficients that represents the acoustic input
- New
  - Feed-forward neural network
    - Takes several frames of coefficients as input and produces posterior probabilities over HMM states as output

# Hidden Markov Model

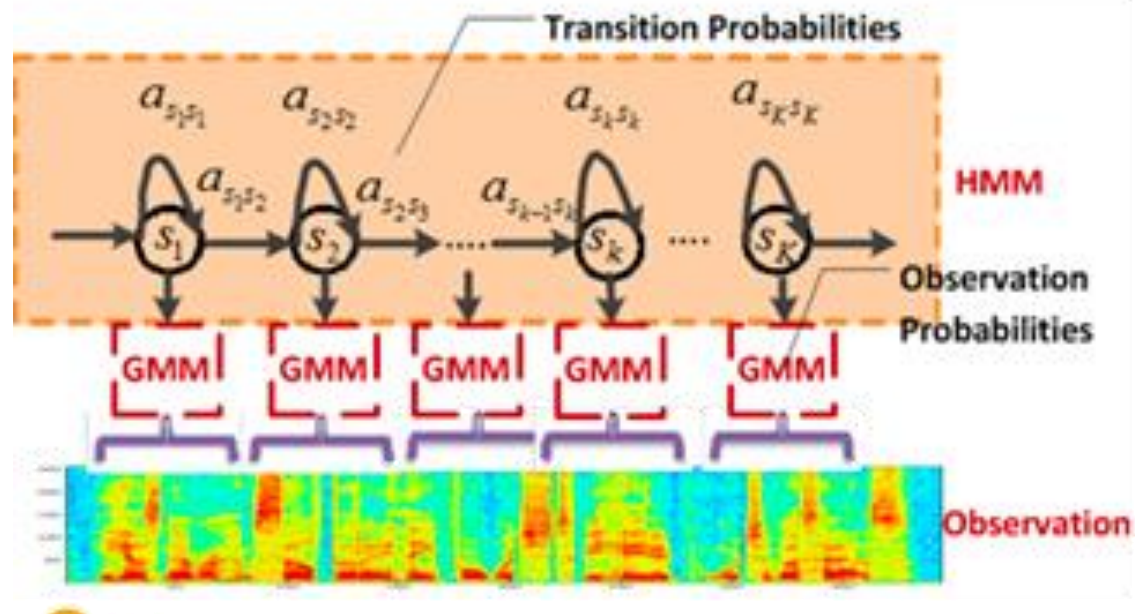

Example (cont):

$N=2$   
 $M=3$

# Speech recognition

## ■ Deep Learning: From **GMM-HMM** to **DNN-HMM**

# Natural Language Processing (NLP) -- Word2Vec

Image and audio processing systems work with rich, high-dimensional datasets encoded as vectors.

Kim, Y. (2014, October). Convolutional Neural Networks for Sentence Classification. In *Proceedings of the 2014 Conference on Empirical Methods in Natural Language Processing (EMNLP)* (pp. 1746-1751).

# NLP -- BERT

- BERT
  - Bidirectional Encoder Representations from [Transformers](#)
  - The pre-train deep bidirectional representations from unlabeled text by jointly conditioning on both left and right context in all layers
  - The pre-trained BERT model can be finetuned with just one additional output layer to create state-of-the-art models for a wide range of tasks, such as question answering and language inference, without substantial task-specific architecture modifications
  - It obtains new state-of-the-art results on eleven natural language processing tasks

Devlin, J., Chang, M. W., Lee, K., & Toutanova, K. (2018). Bert: Pre-training of deep bidirectional transformers for language understanding. *arXiv preprint arXiv:1810.04805*.

# NLP -- BERT

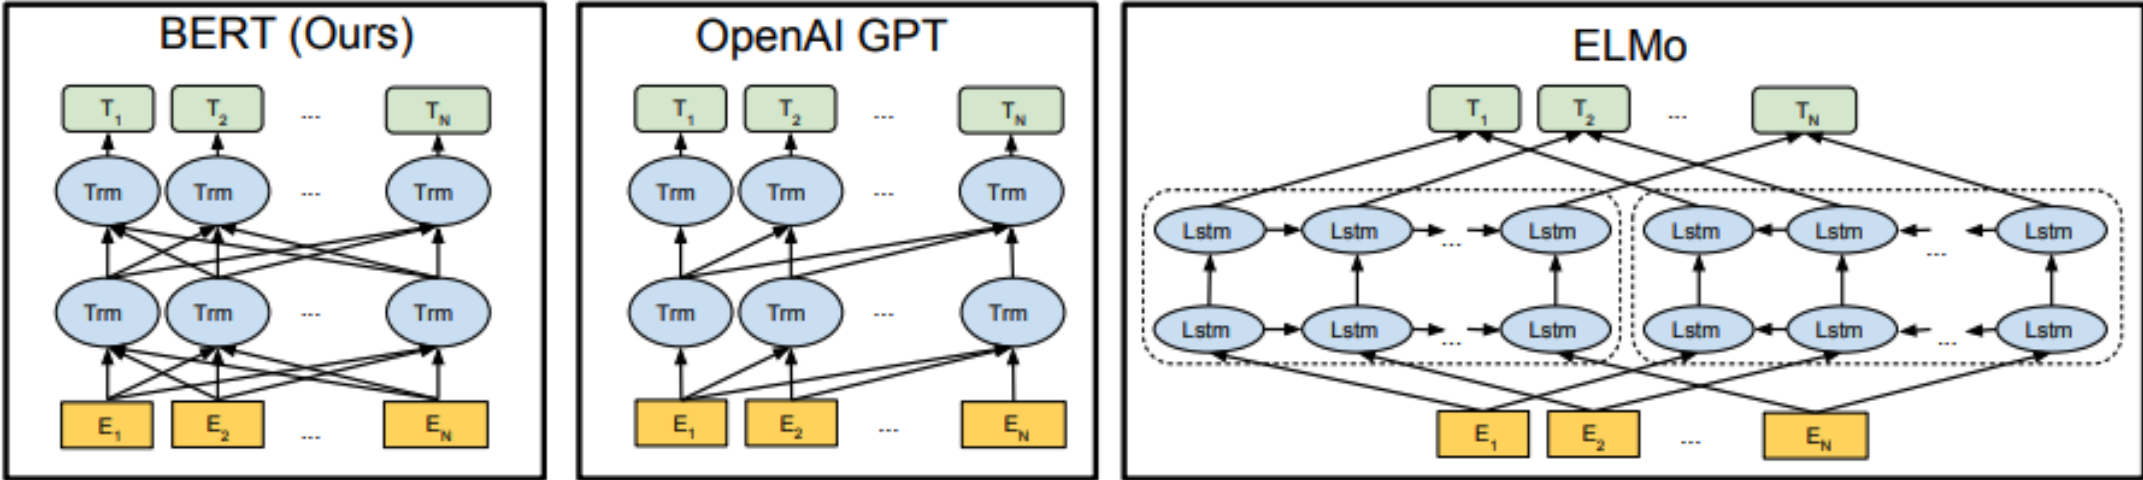

Figure 1: Differences in pre-training model architectures. BERT uses a bidirectional Transformer. OpenAI GPT uses a left-to-right Transformer. ELMo uses the concatenation of independently trained left-to-right and right-to-left LSTM to generate features for downstream tasks. Among three, only BERT representations are jointly conditioned on both left and right context in all layers.

# Game Playing -- Atari

## Deep Reinforcement Learning

Trained separate DQN agents for 50 different Atari games, without any prior knowledge of the game rules

# Game Playing

- IBM Deep Blue (1996)
  - Win Garry Kasparov by 3.5:2.5 on Chess
  - Search over 12 following steps
- AlphaGo (2016)
  - Win Lee Sedol by 4:1 on Go
  - Efficient search on large solution space

Silver, D., Huang, A., Maddison, C. J., Guez, A., Sifre, L., Van Den Driessche, G., ... & Dieleman, S. (2016). Mastering the game of Go with deep neural networks and tree search. *nature*, 529(7587), 484.

# Game Playing -- Texas hold'em

## DeepStack

- In a study involving 44,000 hands of poker, DeepStack defeated with statistical significance professional poker players in heads-up no-limit Texas hold'em
- Imperfect information setting

Moravčík, M., Schmid, M., Burch, N., Lisý, V., Morrill, D., Bard, N., ... & Bowling, M. (2017). Deepstack: Expert-level artificial intelligence in heads-up no-limit poker. *Science*, 356(6337), 508-513.

# Web search

The image shows a Google search interface. The search bar contains the text "shanghai jiao tong university". Below the search bar, a dropdown menu displays four query suggestions: "shanghai jiao tong university ranking", "shanghai jiao tong university international students", "shanghai jiao tong university school of medicine", and "shanghai jiao tong university admission". The fourth suggestion is highlighted with a red box. To the right of the suggestions, a bullet point is labeled "Query suggestion". Below the suggestions, the search results are displayed. The first result is "Scholarly articles for shanghai jiao tong university" with three sub-entries. The second result is "Shanghai Jiao Tong University" with a link to "en.sjtu.edu.cn/" and a list of site search options. The third result is "上海交通大学" with a link to "www.sjtu.edu.cn/" and a brief description. The fourth result is "Shanghai Jiao Tong University - Wikipedia" with a link to "https://en.wikipedia.org/wiki/Shanghai\_Jiao\_Tong\_University" and a brief description. This result is also highlighted with a red box. To the right of this result, a bullet point is labeled "Page ranking".
